

## Our values

Nature awakens our pursuit of sustainable life quality. Combining old knowledge with new technologies, we create Innovation.

At DPM Mashel we have developed a unique product and contribute to environmental protection with our sustainable, ecological concept. Through transportation of FARNOVO (DPM Classic) – our dry wall paint – up to 50 % CO2 can be saved.

↳ Dry material is packed better and no water is transported.

With our optimized reusable mixing bucket concept, you reduce up to 80 % of your special plastic waste (paint buckets).

↳ As you renovate, always dissolve fresh paint in the same reusable mixing bucket.

FARNOVO gives you the opportunity to consume only as much as you need. You can easily seal the remaining dry paint and keep it for subsequent work.

An innovation gets people moving, and when someone asks us why we expend the effort, we answer very clearly:

**Because we love life.**

## Dry Paint Manufacturing Mashel (DPM Mashel)

We are glocky – we think globally and trade/act locally

DPM Mashel is a young and innovative company from Aachen. We have intensively researched for you for two years and it was worth it. In 2018 we developed the first high quality dry wall paint FARNOVO. We are the specialists.

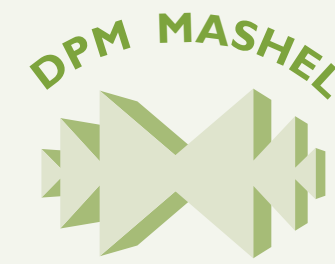

Our priority:  
**The healthy, modern interior design.**

Our Inspiration:  
**Nature.**

Our goal:  
**Sustainability.**

**DPM Mashel GmbH**

The ecological world of FARNOVO  
**FARNOVO**

Suitable for allergy sufferers & odorless

Free of solvents & plasticizers

Free from biocides & preservatives

## Dry ecological wall paint

### What is dry wall paint?

Dry water-soluble wall paint of a new generation combines the best properties of modern high-quality emulsion paints (hiding power, wet abrasion) and natural environmentally friendly hues of clay and lime (organic purity).

### What do we offer?

If ordinary emulsion paints try to reduce harmful for your health substances in their composition, they are completely absent in our paint. If you miss quality in natural organic paints, our paint guarantees you it. FARNOVO is the paint of the next generation. Our product combines quality and sustainable ecological thinking.

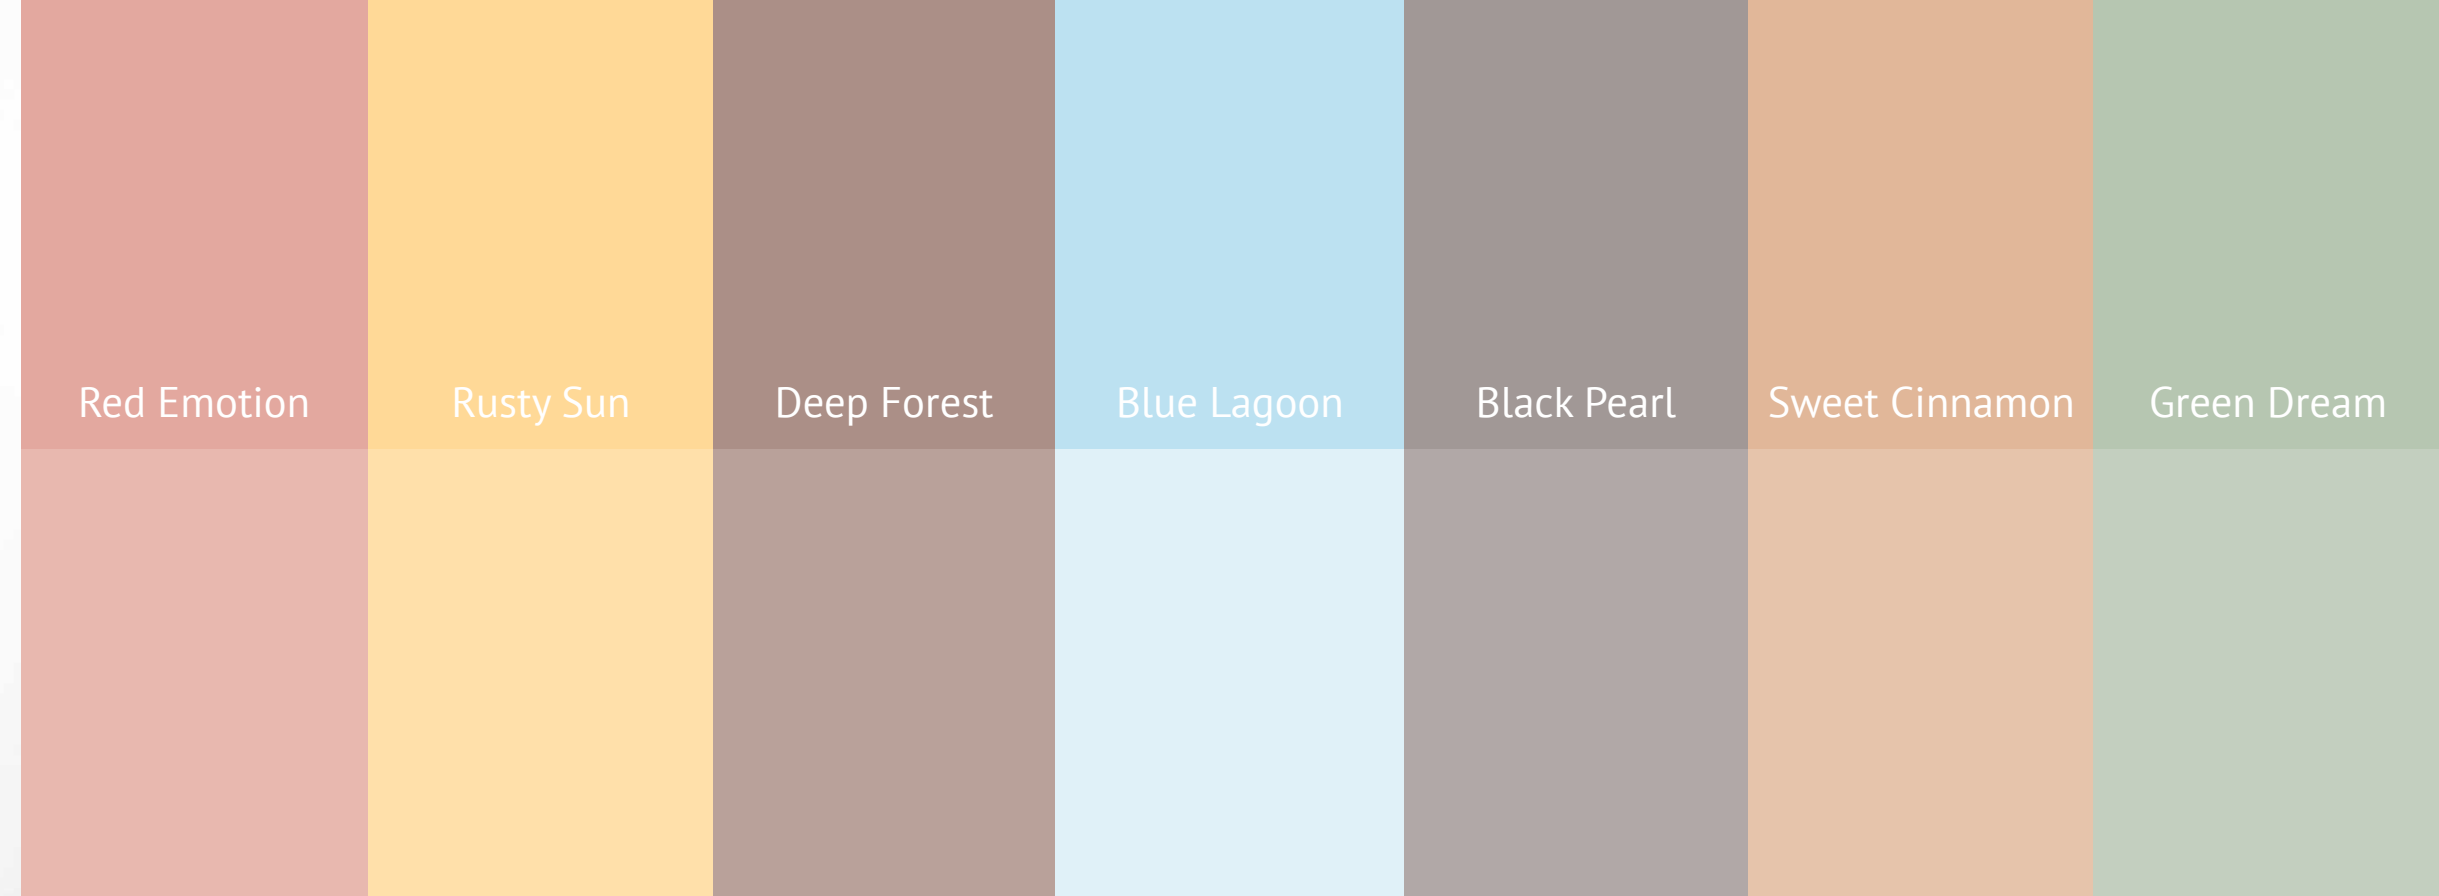

### Best suitable for

Whether on plaster or plasterboard, in an old or new building, in the office or at home - your health deserves an odorless, emission-free environment. The future needs progressive, ecological ideas. We offer the solution, you make the decision. The warm white color of FARNOVO and its decorative design options make a healthier interior design possible.

**Breathe freely and enjoy pure air in your beloved home.**

## Carefree with FARNOVO

### Ecological wall paint for a healthier home

Our values – quality of life, innovation, sustainability – are an essential part of our product. With FARNOVO you make your choice for your health and environment-friendly quality.

- ✓ Free of harmful chemicals (for a better future)
- ✓ Child-oriented (paint and have fun)
- ✓ Odor-free (healthy indoor climate)
- ✓ Environmental friendly (sustainability concept)
- ✓ Suitable for allergy sufferers
- ✓ Mix as much as you need (act ecologically)

## Application of FARNOVO and DECOTON

### Fast application and high functionality save time and money

A dry color does not need any preservatives. A dry color contributes to a more environmentally friendly use of resources. A dry color can achieve the highest German market quality.

- ✓ Mix fresh paint in only 5 minutes at home (the innovation)
- ✓ Mix without splashing with the DPM mixer (clean rooms)
- ✓ A uniform individual hue (no problem)
- ✓ Professional friendly (Hiding power class 1)
- ✓ Best quality over many years (durable)
- ✓ High functionality (1 product – 3 applications)

## DECOTON

### Our color-concept – your master's signature

DECOTON is a unique pigmentation concept based on our high quality dry wall paint FARNOVO (DPM Classic). With DECOTON you get individual wall design options and healthier ecological designer solutions. DECOTON is 100% based on mineral pigments and reflects our company philosophy.

*Master's Signature*

#### Primary/base coat

5 kg FARNOVO + 5 l water = about 8 l primer coat \* (covers up to 70-100 sq. m. in one coat)

#### Interior wall paint

5 kg FARNOVO + 3 l water = about 5,5 l paint \* (covers up to 40-55 sq. m. in one coat \*\*)

#### Polymer fine filler

5 kg FARNOVO + 2,5 l water = ca. 5 l fine putty \*

\* All information was measured under standard laboratory conditions.  
 \*\* You get the best color result in combination with a previous primer. In rare cases, with very uneven, colored substrates or non-absorbent surfaces, we recommend a second coat of paint with FARNOVO.
